

# Download Air Transport And The Environment

Clean air is essential to our health and to the environment. But since the industrial revolution, the quality of the air we breathe has deteriorated considerably - mainly as a result of human activities. Rising industrial and energy production, the burning of fossil fuels and biomass, as well as the ...About this document It is well recognised that Australia's current air quality remains very good by world standards. Australian governments have, over a number of years, successfully implemented measures to reduce air pollution which have significantly improved Australia's overall air quality with positive environmental and health impacts. The environment is one of aviation's top priorities. Airlines are working constantly to limit their climate change impact, emissions and noise. IATA helps them do so. Excess seat capacity and rising fuel prices leaves German airline recording high negative
