All five of these cats were alive at their last evaluation (mean disease-free interval = 479 days). The median survival time for the five cats with incomplete tumor resection was 910 days. The median survival time for the cats not operated on was 60 days. The cats that underwent surgery had significantly longer survival times. BSAVA Manual of Canine and Feline Abdominal Surgery, 2nd Edition. by John M. Williams, Jacqui D. Niles February 2016 Extensively revised and updated, the new edition of the BSAVA Manual of Canine and Feline Abdominal Surgery provides a ready source of practical information for veterinary surgeons, students, nurses and technicians. How well can you answer pet owners' questions about proper diet and feeding? Canine and Feline Nutrition: A Resource for Companion Animal Professionals 3rd Edition describes the role of nutrition and its effects upon health and wellness and the dietary management of various disorders of dogs and cats. This is the dreaded cruciate ligament surgery in dog knees. All by itself, this surgery is a multi-billion dollar a year veterinary industry. Seeing as it's the most common surgery they perform, it's now become the vet surgeon's bread and butter, which is probably why a vet surgeon will always be the best choice should your dog need one. Elizabethan collars, or more commonly known as e-collars, are often used in veterinary medicine and sometimes referred to as a cone, lampshade, or "the cone of shame" as in the movie *Up*. These plastic cones are fitted to individual pets and are used to prevent dogs and cats from biting, scratching and licking wounds, incisions, or other injured areas. *Anatomy in feline surgery* Raymond Francis Sis Iowa State University Follow this and additional works at: <https://lib.dr.iastate.edu/rtd> ... some, nonresponsive conditions are found in cats than in dogs. This can be attributed to the fact that for centuries the cat's anatomy has remained virtually unchanged (Stansbury) cats and dogs. Common, nonspecific signs include depression, loss of appetite, bounding peripheral pulses, and vomiting and/ or diarrhea. Dogs commonly develop injected (brick red) mucous membranes; cats do not. 2 It is important to remember the diagnostic criteria for cats and dogs. 2 Dogs must have two of the four signs *Journal of Feline Medicine and Surgery* 2013 15: 219 L Westropp Sarah L H Ellis, Ilona Rodan, Hazel C Carney, Sarah Heath, Irene Rochlitz, Lorinda D Shearburn, Eliza Sundahl and Jodi *AAFP and ISFM Feline*
