Criteria: All Types; Any Curriculum; Languages; Any Subject; Any Year; Any Grade; GR 12 PHYSICAL SCIENCES EXAM QUESTION PAPERS & MEMOS Exam Question Papers Paper 1 (Physics) 1 Paper 2 (Chemistry) The collapsing ice-rich permafrost along the Arctic coast of Alaska shown in Fig. 1 demonstrates two features of the contemporary Arctic: irreversible changes from release of water, CO₂, and methane from thawing permafrost, and accelerating interacting changes caused by increased wave action driving erosion, given more sea-ice-free coastlines.. Download high-res image (275KB) Plastic contamination is an increasing environmental problem in marine systems where it has spread globally to even the most remote habitats. Plastic pieces in smaller size scales, microplastics (particles <5 mm), have reached high densities (e.g., 100 000 items per m³) in waters and sediments, and are interacting with organisms and the environment in a variety of ways.
